Interpretation

Distraction Index (DI): The laxity ranking is based on the hip with the greater laxity (larger DI). In this case the DI used is 0.15.
 OA Risk Category: The DI is less than or equal to 0.30. This patient is at minimal risk for hip OA.
 Distraction Index Chart:

NEWFOUNDLAND

BREED STATISTICS: This interpretation is based on a cross-section of 2778 canine patients of the NEWFOUNDLAND breed in the AIS PennHIP database. The gray strip represents the central 90% range of DIs (0.32 - 0.83) for the breed. The breed average DI is 0.56 (solid square). The patient DI is the solid circle (0.15).

SUMMARY: The degree of laxity (DI = 0.15) ranks the hip within the tightest 5% of DIs for the breed. This amount of hip laxity places the hip at a minimal risk to develop hip OA. **No radiographic evidence of OA for either hip.**
